NORTHLAND
INSTITUTE of TRADES

Providing enrolled students with professional and practical training that enables them to execute their occupation with integrity and proficiency of the highest degree.

Training Students for a Lifetime of Service

Northland Institute of Trades and Technology is a unique, residential training program that seeks to shape the whole person in their expertise and character to meet the challenges of our culture. This year's course of study will be the Facilities Maintenance Track. Future tracks include Heating and Air Conditioning, Mechanics, and General Contracting/Carpentry.

On-Site Experience

There is nothing more effective than the practical and personal participation a residential program can provide where each student is given targeted, personal attention and dynamic instruction in a conservative, Christian atmosphere. Online classes may bring a greater convenience, but they fall short of the practical skills learned and the life-touching-life experience gained while on campus.

Students that Benefit

The Northland Institute of Trades and Technology benefits those desiring to invest a year or more of their lives to increase their knowledge, develop their character, and prepare them for a career that makes a difference in the world around them. We invite all those who are interested in preparing for their future while transforming their present to come and experience professional enrichment, leadership development, and vocational training taught by experienced, caring instructors.
